

FELIX PRODUCTO

Rule Book (V2.2)

A Game by:

Nicholai Khitrykh, Noah Leibert, Marcus Polson and Owen

Sample

1 Player	60-90 Minutes	13 +
----------	---------------	------

Pieces:

Game Board:

A 6x6 grid containing the Round Counter, 4 marked Input Tiles and 2 marked Output Tiles.

Machines:

There are 4 Types of Machines that are Placed on Game Board Tiles:

Inputs	Recipes	Optional Outputs	Objective Outputs
--------	---------	------------------	-------------------

Credits:

Give yourself the number of Credit Tokens specified on the Digital Portal for each level. Larger Tokens are worth 5 Credits, smaller Tokens are worth 1 Credit.

Conveyors:

36x straight, 24x curved, and 18x split Conveyors connect Resources to Inputs, Recipes, Optional Outputs and Objective Outputs.

Digital Portal: <https://nkhitrykh.github.io/felix-producto/>

See Digital Portal for Rule Video

Game Overview:

Each level, your objective is to produce the required resources within the budgetary restraint. There are 3 types of actions you can take, Recipe actions, Building Actions and Conveyor Actions. These actions can be performed at any time so long as you can pay the required Credit cost.

Once the line is complete, you will “Switch on” the Factory and complete the level!

Between each level, there are narrative decisions and setup directions for the next level on the Digital Portal.

Game Setup:

1. Place the Game Board in the center of the table, aligning each side to make a 6x6 grid with the marked INPUT Tiles in the top-left Corner, and the OUTPUT Tiles on the bottom-center.
2. Place the designated Inputs, Optional Outputs and Objective Outputs for the Level on their assigned Tiles of the Game Board (see Digital Portal or Level Index). Set any unused Inputs and Outputs aside, you will not need these for the current level.
3. Take the designated Recipes for the Level and order them numerically, placing them Face Down on the Table (see Digital Portal or Level Index). Set any unused Recipes aside, you will not need these for the current level.
4. Give yourself the number of Credits as specified in the Setup directions for each Level on the Digital Portal. These will be spent to Perform Actions.

Winning the Level:

During the Clean-Up Phase, if every Objective Output is Produced and connected to an Objective Output Tile via Conveyors, you will “Switch On” the Factory, and the Level is immediately Won! (see the Digital Portal after the completion of each Level). Any unspent Credits will increase your Score for the Level.

NOTE: All recipes activate simultaneously and will Receive their Inputs and Produce their Outputs.

NOTE: All Resources are simultaneously transported along the Conveyor network.

NOTE: Producing more than the required Objective Outputs will still complete the Level (ie. 3 Steel will complete the objective of 2 Steel)

Losing the Level:

If at any point you run out of Credits, you will lose the current Level. WORRY NOT! You can always retry a level, just follow the directions on the Digital Portal.

Winning the Game:

Once all Levels have been completed and all Digital Portal decisions have been made, you have won the Game!

Playing the Game:

Digital Portal: Contains Level Setup and Objectives in addition to narrative between levels. When provided, follow directions on the Digital Portal.

Actions: Any Action may be performed at any time so long as you can pay the necessary Credits. See below for Actions and Action Notes.

Credits: Obtained at the start of each level (as defined by Level Setup on the Digital Portal) and by completing Optional Outputs paced on the Game Board during setup. These are spent to perform Actions throughout the Game. Any leftover Credits at the end of each Level will determine your Score for that Level.

Recipes: Placed by the player on the Game Board to convert resources according to their labels. Recipes are Purchased into Storage and then Placed on the Game Board.

NOTE: You may only have 1 Recipe in Storage at any given time. To Store a new recipe, you must place your currently Stored Recipe.

NOTE: Providing a multiple of the required inputs for a Recipe will produce outputs proportionally. (For example: 2 Steel -> 1 Copper. Providing 4 Steel will produce 2 copper. providing 6 steel will produce 3 copper, and so on).

Inputs: Start on the Game Board as defined by the Setup in the Digital Portal. Inputs provide the starting Resources for Recipes or Optional Outputs to consume. These may not be moved from their starting Tile.

Optional Outputs: Start on the Game Board as defined by the Setup in the Digital Portal. Satisfying these will immediately grant you additional Credits for the current Level.

NOTE: completing Optional Objectives is NOT required to complete the Level

NOTE: optional outputs do not have a marked space on the game board and are instead assigned to a regular tile by the Level Setup on the Digital Portal. Unlike Inputs and Objective Outputs, Optional Outputs may be moved from their starting Tile for -1 Credit.

Objective Outputs: Start on the Game Board as defined by the Setup in the Digital Portal. Satisfying these is required to beat the current Level. These may not be moved from their starting Tile.

Conveyors: Exist along the Yellow borders of Game Board Tiles and connect inputs, Recipes and Outputs. These will remain on the Board until you Alter or Remove them.

NOTE: you may choose how much of each resource is diverted in either direction from a Split conveyor.

Actions:

Any of these actions may be performed at any time so long as you spend the required Credits:

Recipes:

- ☐ Purchase the Top Recipe for the Credits cost labeled on the Recipe.

Building:

- ☐ Move an already Placed Recipe for - 1 Credit.
- ☐ Place any number of Recipes from Storage onto the Game Board for -0 Credits.
- ☐ Swap the placement of 2 Recipes for - 2 Credits.

Conveyors:

- ☐ Place any number of Straight Conveyors for -0 Credits.
- ☐ Place or Alter a Curved or Split Conveyor for -1 Credits.

Action Notes:

Any Action may be performed at any time so long as you spend the required Credits.

1. Recipes

- a. Purchase the Top Recipe for the Credits cost labeled on the Recipe.
 - i. If you Purchase a Recipe, pay its cost immediately, that recipe is now in Storage.
 - ii. **You may only have 1 Recipe in Storage at a time.** In order to Purchase more Recipes, you must Place your stored Recipe on the Game Board.

2. Building

- a. Move an already Placed Recipe for - 1 Credit.
 - i. Rotating the Orientation of a Placed Recipe is Free.
- b. Place any number of Recipes from Storage onto the Game Board for -0 Credits.
 - i. Recipes may be placed on ANY Tile in ANY orientation.
 - ii. This does NOT cost Credits as the Recipe has already been Purchased.
 - iii. Recipes do NOT have to be adjacent to each other, but WILL need conveyor connections to function.
- c. Swap the placement of 2 Recipes for - 2 Credits.
 - i. This action may NOT be Performed for more than 2 Recipes at once. Swapping three Recipes will require 2 Credits to swap the first pair, then an additional 2 Credits to swap the second pair.

3. Conveyors

- a. Place any number of Straight Conveyors for -0 Credits.
 - i. Altering, Moving, Replacing or Removing Straight Conveyors is also free.
 - ii. As a general rule, Conveyors may cross each other as a bridge but may never share the same lane (Yellow Border of a Game Board Tile).
 - iii. Conveyors may NOT be placed as a bridge on top of Recipes, Inputs, Outputs or empty Game Board Tiles.
 - iv. Conveyors MUST be placed on the Yellow Borders of Game Tiles. Conveyors CANNOT be placed Diagonally.
- b. Place or Alter a Curved or Split Conveyor for -1 Credits.
 - i. Rotating, Moving, Replacing or Removing an EXISTING Split or Curved Conveyor is free.
 - ii. Rules about Bridging and Lane share also apply to Split and Curved Conveyors (see above)
