

FELIX PRODUCTO

Rule Book

A Game by:

Nicholai Khitrykh, Noah Leibert, Marcus Polson and
Owen Sample

1 Player	165 Minutes	13 +
----------	-------------	------

Pieces:

⇒ *You may need a pen and paper* ⇐

Game Board:

A 6x6 grid containing the Round Counter, 4 marked Input Nodes and 2 marked Output Nodes.

Machines:

4 Types of Machines are Placed on Game Board Tiles:

Inputs	Recipes	Optional Outputs	Objective Outputs
--------	---------	------------------	-------------------

Credits:

Give yourself the number of Credit Tokens specified on the Digital Portal for each level. Larger tokens are worth 5 Credits, smaller tokens are worth 1 Credit.

Conveyors:

36x straight, 24x curved, and 18x split Conveyors connect Resources to Inputs, Recipes, Optional Outputs and Objective Outputs. There are no merging Conveyors - merges must be made by overlapping a Curved Conveyor and an Existing Straight Conveyor

Digital Portal: <https://nkhitrykh.github.io/felix-producto/>

See Digital Portal for Intro Video and level setups. The Intro Video does NOT cover all rules - reading this rule book is highly recommended.

Game Overview:

In each level, your objective is to produce the required resources within the budgetary constraint. There are 3 types of actions you can take: Recipe actions, Building Actions and Conveyor Actions. These actions can be performed at any time so long as you can pay the required Credit cost.

Once the line is complete, you will “Switch on” the Factory and complete the level!

Between each level, there are narrative decisions and setup directions for the next level on the Digital Portal.

Game Setup:

1. Place the Game Board in the center of the table, aligning each side to make a 6x6 grid with the marked Input Nodes in the top-left Corner, and the OUTPUT Nodes on the bottom-center.
2. Place the Inputs and Objective Outputs for the Level on any of their marked Tiles of the Game Board. Set any unneeded Inputs and Objective Outputs aside, you will not need these for the current level.
3. Place an Optional Output on any Game Board Tile. Set any unneeded Optional Outputs aside, you will not need these for the current level.
4. Take the designated Recipes for the Level (see Digital Portal) and order them numerically, with Recipe 0 at the top of the deck. Place the deck on the Table with the Inputs/Outputs face down. Set any unused Recipes aside, you will not need these for the current level.
5. Give yourself the number of Credits as specified in the Setup directions for each Level on the Digital Portal. These will be spent to Perform Actions.

Winning the Level:

If at any point you have Produced and Connected every Objective Output, you will “Switch On” the Factory, and the Level is immediately Won! (see the Digital Portal after the completion of each Level)

NOTE: All recipes activate simultaneously and will Receive their Inputs and Produce their Outputs.

NOTE: All Resources are simultaneously transported along the Conveyor network.

NOTE: Producing more than the required Objective Outputs will still complete the Level (ie. 3 Steel will complete the objective of 2 Steel)

Losing the Level:

If at any point you run out of Credits, you will lose the current Level. WORRY NOT! You can always retry a level, just follow the directions on the Digital Portal.

Winning the Game:

Once all Levels have been completed and all Digital Portal decisions have been made, you have won the Game!

Component Notes:

Digital Portal: Contains Level Setup and Objectives in addition to narrative between levels. When provided, follow directions on the Digital Portal. The link is provided above.

Actions: Any Action may be performed at any time so long as you can pay the necessary Credits. See below for Actions and Action Notes.

Credits: Obtained at the start of each level as defined by the level setup in the Digital Portal and by completing Optional Outputs.
Credits are spent to perform Actions throughout the level. Any leftover Credits at the end of each Level will determine your Score for that level and will NOT carry over to the next Level.

Recipes: Placed by the player on the Game Board to convert resources according to their labels. Recipes are Purchased from the Recipe Deck and may be put into Storage or be Placed on the Game Board. **The only Recipes you may view are Purchased Recipes in Storage or Recipes Placed on the Game Board.** All other Recipes remain face down in the Recipe Deck in numerical order starting at 0.

NOTE: You **WILL NOT** need to use every Recipe to complete a level.

NOTE: You **may only have 2 Recipes in Storage** at any given time. To Store a new recipe, you must place a currently Stored Recipe on the Game Board.

NOTE: **Providing a multiple of the required inputs for a Recipe will produce outputs proportionally.** For example: 2 Steel -> 1 Copper. Providing 4 Steel will produce 2 Copper. Providing 6 Steel will produce 3 Copper, and so on. 2x, 3x, 4x and 5x Tokens have been provided.

Inputs: Start on any Input Node. Inputs provide the starting Resources for Recipes or Optional Outputs to consume for the Level. **These may NOT be moved from the Input Nodes and may not be rotated from their starting position.** Moving Inputs to another Input Node may be done at any time.

Optional Outputs: Start anywhere on the Game Board as placed by the player in Setup. Satisfying these will **immediately grant you the additional Credits** labeled.

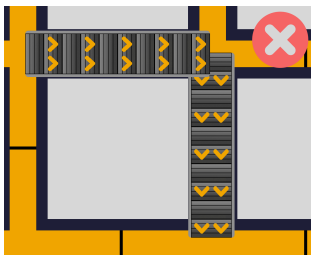

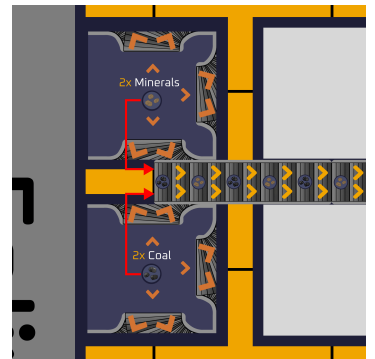

NOTE: Completing Optional Outputs is NOT required to complete the Level

NOTE: Optional Outputs do not have a marked space on the game board and are placed on any Tile by the Player in Setup. Unlike Inputs and Objective Outputs, **Optional Outputs MAY be moved from their starting Tile.**

Objective Outputs: Start on any Output Node. Satisfy these to beat the current Level. **These may NOT be moved from their marked Nodes, but MAY be rotated.** Swapping Output position on marked Output Nodes may be done at any time.

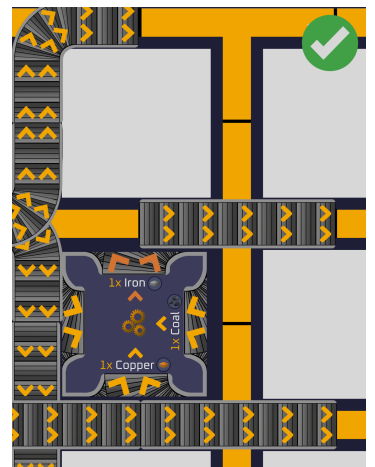

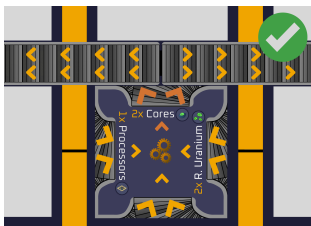

Conveyors: Are placed by the Player on the Yellow borders of Game Board Tiles and connect Inputs, Recipes and Outputs. **Only Curved or Split Conveyors can be used to make a turn.** Create a Merge by Curving a path onto another (See Conveyor Action Notes).

NOTE: **Conveyors MAY transport more than one type of resource** (ie. Conveyors can "Share" Coal and Minerals as seen on the right).

NOTE: **Adjacency = Conveyor Connection.** Players may choose whether or not a conveyor connects to an Input, Recipe or Output.

The image to the right shows proper assembly on the Game Board. The Copper and Iron would be satisfied, **but the coal input would not be,** meaning the Recipe would not be producing Iron.

Actions:

Any of these actions may be performed at any time so long as you can spend the required Credits:

Recipes:

- ☐ Purchase and Reveal the top Recipe for the Credit cost labeled on the Recipe.

Building:

- ☐ Move an already Placed Recipe for - 1 Credit.
- ☐ Place a Purchased Recipe onto the Game Board for -0 Credits.
- ☐ Swap the position of 2 Placed Recipes for - 2 Credits.

Conveyors:

- ☐ Place or Alter any number of Straight Conveyors for -0 Credits.
- ☐ Place a Curved or Split Conveyor for -1 Credits.

Action Notes:

Any Action may be performed at any time so long as you can spend the required Credits.

Recipes

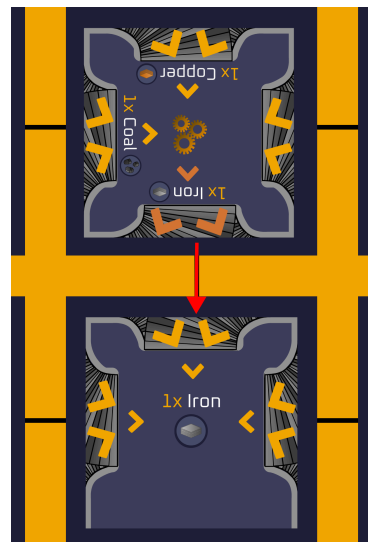

- 1) Purchase and Reveal the Top Recipe for the Credits cost labeled on the Recipe.
 - a. *Pay its cost and reveal (flip over) immediately. You may either Store or Place the Recipe on the Game Board.*
 - b. ***You may only have 2 Recipes in Storage at any time. In order to Store more Recipes, you must Place Stored Recipes.***

Building

- 1) Move an already Placed Recipe for - 1 Credit.
 - a. *Rotating the Orientation of a Placed Recipe is free.*

2) Place a Purchased Recipe onto the Game Board for -0 Credits.

- a. *Recipes from Storage may be Placed onto empty Tiles or Replace existing Recipes for -0 Credits at any time.*
- b. *Recipes may be placed on ANY Tile in ANY orientation.*
- c. *Adjacent Recipes do NOT need a Conveyor to transfer resources between them as seen on the right (1 Iron will be transferred to the Objective Output without Conveyors).*

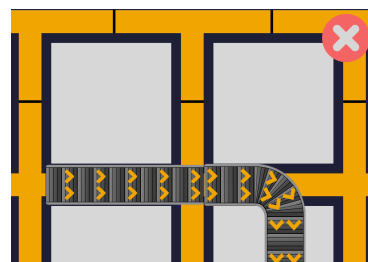

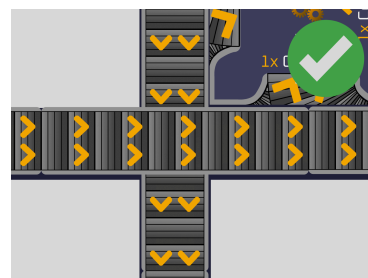

3) Swap the position of 2 Placed Recipes for - 2 Credits.

- a. *This action may NOT be Performed for more than 2 Recipes at once. Swapping three Recipes will require performing this Action twice.*

Conveyors

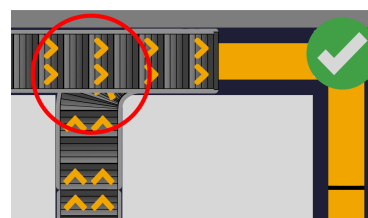

1) Place or Alter any number of Straight Conveyors.

- a. *Altering or Moving Straight Conveyors is **free**.*
- b. *Conveyors may cross each other as a bridge but may never share the same Yellow Border.*
- c. ***ALL Conveyors MUST be placed on the Yellow Borders** of Game Tiles. Conveyors CANNOT be placed on top of Recipes, Inputs, Outputs or empty Game Board Tiles and CANNOT be placed diagonally.*

2) Place a Curved or Split Conveyor for -1 Credit.

- a. *Rotating or Moving an **EXISTING** Split or Curved Conveyor is **free**.*
- b. *Curved or Split Conveyors **MAY be used to create a merge** as pictured to the right.*
- c. *Removing a Split or Curved Conveyor will immediately **Refund its cost**.*

Quick Reference

→ *See Digital Portal for level Setup* ←

Any of these actions may be performed at any time so long as you can spend the required Credits:

Recipes:

- ☐ Purchase and Reveal the top Recipe for the Credit cost labeled on the Recipe.

→ You may only have 2 Recipes in Storage at any given time.

Building:

- ☐ Move an already Placed Recipe for - 1 Credit.
- ☐ Place a Purchased Recipe onto the Game Board for -0 Credits.
- ☐ Swap the position of 2 Placed Recipes for - 2 Credits.

→ Rotating Recipes is free.

→ Swapping out Placed Recipes and Recipes from Storage is free.

Conveyors:

- ☐ Place or Alter any number of Straight Conveyors for -0 Credits.
- ☐ Place a Curved or Split Conveyor for -1 Credits.

→ Altering a Curved/Split Conveyor is free.

→ Removing a Curved/Split Conveyor will refund its cost.
